The Economic Value of Indiana University South Bend

EXECUTIVE SUMMARY
**Introduction**

University South Bend (IU South Bend) and the daily lives of Hoosiers are inextricably intertwined. Through economic engagement activities, IU South Bend connects its intellectual and creative resources with strategic opportunities that not only align educational programs with the workforce needs of the region, but the regional campus also provides a foundation to foster continued economic growth.

Recognizing that active engagement in the economic well-being of the region is a primary obligation for IU South Bend. Through the vast scope of its activities, the regional campus benefits the area by educating citizens, enriching arts and culture, enhancing policymaking, developing sustainable infrastructure, and promoting economic growth. In terms of direct contributions to this economic growth, the regional campus purchases a considerable amount of goods and services from local businesses across the region while also employing residents, each of whom contributes directly to local tax bases.

Additionally, IU South Bend supports creation of new jobs in vital growth sectors and prepares a workforce ready to fill them. Research indicates that a well-educated workforce corresponds with improved health, lower rates of mortality, and lower overall rates of crime and poverty. A degree from IU South Bend provides citizens with the capacity to increase lifetime earning potential and to achieve upward social mobility. IU South Bend alumni contribute greatly to the region in serving their local communities as business owners and employers, entrepreneurs, researchers, teachers, policymakers, and more.

This study measures the economic impacts created by IU South Bend on the business community and the benefits the regional campus generates in return for the investments made by its key stakeholder groups—students, taxpayers, and society. The following two analyses are presented:

**Economic impact analysis**

**Investment analysis**

All results reflect employee, student, and financial data, provided by university administration and the regional campus, for fiscal year (FY) 2018-19 (July 1, 2018 – June 30, 2019). Impacts on the IU South Bend service area economy are reported under the economic impact analysis and are measured in terms of added income. It should be noted that IU South Bend also serves several counties in Michigan. However, impact numbers from and for those counties are not reflected in this report. The returns on investment to students, taxpayers, and society in Indiana are reported under the investment analysis.

---

**IU South Bend benefits the area by educating citizens, enriching arts and culture, enhancing policymaking, developing sustainable infrastructure, and promoting economic growth.**

---

**KEY TAKEAWAYS**

- IU South Bend created **$364.1 million** for the region in FY 2018-19.
- One out of every 77 jobs in the region is supported by the activities of IU South Bend and its students.
- For every dollar students invest in their education at IU South Bend, they will receive $4.30 in higher future earnings.
- For every tax dollar spent educating IU South Bend students, taxpayers will receive an average of $1.40 in return over the course of the students’ working lives.

---

1 For the purposes of this analysis, the IU South Bend service area is comprised of Elkhart, Fulton, Kosciusko, La Grange, La Porte, Marshall, St. Joseph, and Starke Counties.
On an annual basis, IU South Bend generates a flow of spending that has a major impact on the regional economy. The impacts are captured by the regional campus’ operations, construction, visitor, and student spending activities. As impressive as these numbers are, they are further enhanced by IU South Bend’s core mission of producing knowledgeable, creative, and entrepreneurial graduates—with the most contemporary skills—who keep IU South Bend service area’s talent pipeline full. Therefore, the greatest economic impact of IU South Bend stems from the added human capital—the knowledge, creativity, imagination, and entrepreneurship—found in its alumni.

While attending IU South Bend, students gain experience, education, and the knowledge, skills, and abilities that increase their productivity and allow them to command a higher wage once they enter the workforce. The employers of IU South Bend alumni enjoy the fruits of this increased productivity in the form of additional non-labor income (i.e., higher profits). IU South Bend’s alumni along with its spending impacts added $364.1 million in income to the regional economy in FY 2018-19.

**Operations spending impact**

IU South Bend adds economic value to the region as an employer of regional residents and a large-scale buyer of goods and services. In FY 2018-19, the regional campus employed 1,255 full-time and part-time faculty and staff, 91% of whom lived in the IU South Bend service area. Total payroll at IU South Bend was $39.8 million, much of which was spent in
the region for groceries, mortgage and rent payments, dining out, and other household expenses. In addition, the regional campus spent $24.5 million on day-to-day expenses related to facilities, supplies, and professional services.

IU South Bend’s day-to-day operations spending added $45.8 million in income to the region during the analysis year. This figure represents the regional campus’ payroll, the multiplier effects generated by the in-region spending of the regional campus and its employees, and a downward adjustment to account for funding that the regional campus received from regional sources. The $45.8 million in added income is equivalent to supporting 1,311 jobs in the region.

Construction spending impact

IU South Bend invests in construction each year to renovate, remodel, demolish, and repair and replace equipment, roofing, windows, boilers, and more. While the amount varies from year to year, these quick infusions of income and jobs have a substantial impact on the regional economy. In FY 2018-19, IU South Bend’s construction spending generated $736.4 thousand in added income, which is equivalent to supporting 11 jobs.

Visitor spending impact

Thousands of visitors from outside the region were attracted to IU South Bend during the analysis year to attend commencement, sports events, and other activities sponsored by the regional campus. While in the region, visitors spent money for food, transportation, and other personal expenses. The off-campus expenditures of the regional campus’ out-of-region visitors generated a net impact of $70.8 thousand in added income for the regional economy in FY 2018-19. This $70.8 thousand in added income is equivalent to supporting two jobs.

Student spending impact

Around 9% of students attending IU South Bend originated from outside the region in FY 2018-19, and some of these students relocated to the area to attend IU South Bend. These students may not have come to the region if the regional campus did not exist. In addition, some in-region students, referred to as retained students, would have left the area if not for the existence of IU South Bend. While attending the regional campus, these relocated and retained students spent money on groceries, accommodation, transportation, and other household expenses. This spending generated $6.1 million in added income for the regional economy in FY 2018-19, which supported 152 jobs in the IU South Bend service area.
Alumni impact

The education and training IU South Bend provides for regional residents has the greatest impact. Since its establishment, students have studied at IU South Bend and entered the regional workforce with greater knowledge and new skills. In addition to technical skills, students are leaving IU South Bend with contemporary skills, such as creativity and leadership, that are in extremely high demand by the region’s leading employers. Today, thousands of former IU South Bend students are employed in the region. As a result of their IU South Bend education, the students receive higher earnings and increase the productivity of the businesses that employ them. In FY 2018-19, IU South Bend alumni generated $311.5 million in added income for the regional economy, which is equivalent to supporting 5,000 jobs.

Total impact

IU South Bend added $364.1 million in income to the regional economy during the analysis year, equal to the sum of the operations and construction spending impacts, the visitor and student spending impacts, and the alumni impact. For context, the $364.1 million impact was equal to nearly 1% of the total gross regional product (GRP) of the IU South Bend service area. This contribution that the regional campus provided on its own is larger than the entire Arts, Entertainment, & Recreation industry in the region.

The additional income of $364.1 million by IU South Bend is equal to nearly 1% of the total GRP of its service area.

IU South Bend’s total impact can also be expressed in terms of jobs supported. The $364.1 million impact supported 6,476 regional jobs, using the jobs-to-sales ratios specific to each industry in the region. This means that one out of every 77 jobs in the IU South Bend service area is supported by the activities of the regional campus and its students. In addition, the $364.1 million, or 6,476 supported jobs, stemmed from different industry sectors. Among non-education industry sectors, IU South Bend’s spending and alumni in the Health Care & Social Assistance industry sector added $70.9 million in income to the region in FY 2018-19. These are impacts that would not have been generated without the regional campus’ presence.

One out of every 77 jobs in the IU South Bend service area is supported by the activities of IU South Bend and its students.
An investment analysis evaluates the costs associated with a proposed venture against its expected benefits. If the benefits outweigh the costs, then the investment is financially worthwhile. The analysis presented here considers IU South Bend as an investment from the perspectives of students, taxpayers, and society in Indiana.

Student perspective

In FY 2018-19, IU South Bend served a total annual unduplicated headcount of 8,610 students, including 2,374 dual credit high school students. By attending IU South Bend, students receive higher future earnings throughout their working lives; however, college is also an investment for students. In order to attend the regional campus, the students paid for tuition, fees, books, and supplies. They also took out loans and will incur associated interest charges. Additionally, students forewent income they would have otherwise earned had they been working instead of attending college. The total investment made by IU South Bend’s students in FY 2018-19 amounted to a present value of $69.9 million.

In return for their investment, IU South Bend’s students will receive a stream of higher future earnings that will continue to grow throughout their working lives. For example, the average IU South Bend bachelor’s degree graduate from FY 2018-19 will see annual earnings that are $21,000 higher than a person with a

The average bachelor’s degree graduate from IU South Bend will see an increase in earnings of $21,000 each year in comparison with a person with a high school diploma or equivalent working in Indiana.

Source: Emsi employment data.

The study used an unduplicated count of students enrolled between 7/1/18 and 6/30/19, which included students enrolled in the Summer II 2018, Fall 2018, Spring 2019, and Summer I 2019 semesters. This count also includes dual credit, high school enrollments as of the end of term, which is the most inclusive count of such students. The method is more meaningful for studying economic impact, but it differs from IU South Bend’s standard enrollment reporting, which uses beginning-of-term numbers on a semester-by-semester basis. Both perspectives accurately draw from the same underlying data.

In FY 2018-19, IU South Bend served 8,610 students, 2,374 of whom were dual credit high school students.
high school diploma or equivalent working in Indiana. Over a working lifetime, the benefits of the bachelor’s degree over a high school diploma will amount to an undiscounted value of $903,000 in higher earnings per graduate. The present value of the cumulative higher future earnings that IU South Bend’s FY 2018-19 students will receive over their working careers is $297.7 million.

The students’ benefit-cost ratio is $4.3\text{.}$ In other words, for every dollar students invest in IU South Bend, in the form of out-of-pocket expenses and forgone time and money, they will receive a cumulative value of $4.30 in higher future earnings. **For every $10,000 students invest in their education at IU South Bend, they will receive $43,000 in return** in the form of higher future earnings. Annually, the students’ investment in IU South Bend has an average annual internal rate of return of **16.7%**, which far surpasses the U.S. stock market’s 30-year average rate of return of **9.9%**.

This analysis is conservative because it does not take into account the improved well-being of IU South Bend students. Many years of research have demonstrated that a college education leads to happier and healthier lives. Educated members of society typically use the knowledge and skills they acquire over their years of learning to pursue their life goals and dreams, while also improving their lifestyles and overall well-being. They are generally more financially stable than those who do not engage in higher education, and they are inspired to work to improve their mental, physical and emotional health.

**Taxpayer perspective**

IU South Bend generates more in tax revenue than it receives. Benefits to taxpayers will also consist of savings generated by the improved lifestyles of IU South Bend students and the corresponding reduced government services. As IU South Bend students will earn more, they will make higher tax payments throughout their working lives. Students’ employers will also make higher tax payments as they increase their output and purchases of goods and services. By the end of the FY 2018-19 students’ working lives, the state and local government will have collected a present value of $32.4 million in added taxes.

Taxpayers will also experience savings generated by the improved lifestyles of IU South Bend students and the corresponding reduced government services. Education is statistically correlated with a variety of lifestyle changes. Students’ IU South Bend education will generate savings in three main areas—health care, crime, and income assistance—of tax savings. Improved health will lower students’ demand for national health care services. In addition, students will be less likely to interact with the criminal justice system, resulting in a reduced demand for law enforcement and victim costs. IU South Bend students will be more employable, decreasing their need for income assistance such as welfare and unemployment benefits. For a list of study references, contact the

regional campus for a copy of the main report. Altogether, the present value of the benefits associated with an IU South Bend education will generate $6.5 million in savings to state and local taxpayers.

Total taxpayer benefits amount to $39 million, the present value sum of the added taxes and public sector savings. Taxpayer costs are $28.4 million, equal to the amount of state and local government funding IU South Bend received in FY 2018-19. These benefits and costs yield a benefit-cost ratio of 1.4. This means that for every dollar of public money invested in IU South Bend in FY 2018-19, taxpayers will receive a cumulative value of $1.40 over the course of the students’ working lives. To state this another way, for every $10,000 invested by taxpayers, they will receive $14,000 in return. The average annual internal rate of return for taxpayers is 3.1%, which compares favorably to other long-term investments in the public and private sectors.

Social perspective

Although the public often emphasizes the benefits of a college degree to themselves, the benefits to society are equally important. Through their volunteer work, leadership and philanthropic contributions, IU South Bend students enrich the civic and economic life of their communities. They contribute more in taxes and they are also less reliant on government programs and services than those without college degrees. They are also more actively involved in vital societal activities, such as voting. In addition, IU South Bend provides vital services to communities that are often overlooked, such as sports, culture, arts, and music. Many of these benefits are difficult to quantify; however, this study is able to capture the increased economic base to the state from the growth in gross state product stemming from IU South Bend’s impact on the state and the higher future earnings. In addition, the personal and governmental benefits from the improved lifestyles of IU South Bend students is captured.

As discussed in the previous section, education is statistically correlated with a variety of lifestyle changes that generate social savings. Note that these costs are avoided by the consumers but are also distinct from the costs circumvented by the taxpayers outlined above. Healthcare savings include avoided medical costs associated with smoking, alcohol dependence, obesity, drug abuse, and depression. Savings related to crime include reduced security costs and insurance administration, lower victim costs, and reduced expenditures by the criminal justice system. Income assistance savings include reduced welfare and unemployment claims. For a list of study references, contact the regional campus for a copy of the main report.

Altogether, the social benefits of IU South Bend equal a present value of $1 billion. These benefits include $981.1 million in added income through students’
increased lifetime earnings and increased business output, as well as $57.2 million in social savings related to health, crime, and income assistance in Indiana. People in Indiana invested a present value total of $112.9 million in IU South Bend in FY 2018-19. The cost includes all the regional campus and student costs.

The benefit-cost ratio for society is 9.2, equal to the $1 billion in benefits divided by the $112.9 million in costs. In other words, for every dollar invested in IU South Bend, people in Indiana will receive a cumulative value of $9.20 in benefits. One can also say that for every $10,000 society invests in IU South Bend, Indiana will see $92,000 in benefits over the students working lives. The benefits of this investment will occur for as long as IU South Bend’s FY 2018-19 students remain employed in the state workforce.

Summary of investment analysis results

The results of the analysis demonstrate that IU South Bend is a strong investment for all three major stakeholder groups—students, taxpayers, and society. As shown, students receive a great return for their investments in an IU South Bend education. At the same time, taxpayers’ investment in IU South Bend returns more to government budgets than it costs and creates a wide range of social benefits throughout Indiana.
Conclusion

This study demonstrates that IU South Bend increases the economic activity in the region, the earnings of its students, and the tax revenues received by the state. The regional campus fills the area’s talent pipeline with knowledgeable, skilled, and innovative employees, who then generate substantial tax revenue for the state. IU South Bend’s alumni not only give back to their region and state through the economic contributions they make, but also through the impact they have on strengthening society. The regional campus enriches the lives of students, drives the success of regional businesses, supports the state and local taxpayers, and advances society as a whole in Indiana by creating a more prosperous economy and generating a variety of savings.

In FY 2018-19, IU South Bend added $364.1 million in income to the region. This income would not have existed in the region without IU South Bend. This is an annual impact and will continue year after year as IU South Bend continues to serve students. The $364.1 million impact was equal to nearly 1% of the total gross regional product (GRP) of the IU South Bend service area. The contribution that the regional campus provided on its own is larger than the entire Arts, Entertainment, & Recreation industry in the region. The impact is equivalent to supporting 6,476 jobs. In other words, one out of every 77 jobs in the region is supported by the activities of IU South Bend and its students.

For every dollar students and taxpayers invested in IU South Bend, they will receive $4.30 and $1.40 in benefits, respectively.

IU South Bend created $364.1 million for the region in FY 2018-19, which is equivalent to saying that one out of every 77 jobs in the region is supported by the activities of IU South Bend and its students.
About the study

Data and assumptions used in the study are based on several sources, including the FY 2018-19 IU South Bend academic and financial reports from Indiana University Financial Management Systems (FMS) and Indiana University Institutional Research and Reporting (UIRR), industry and employment data from the U.S. Bureau of Labor Statistics and U.S. Census Bureau, outputs of Emsi’s Multi-Regional Social Accounting Matrix model, and a variety of studies and surveys relating education to social behavior. The study applies a conservative methodology and follows standard practice using only the most recognized indicators of economic impact and investment effectiveness. For a full description of the data and approach used in the study, please contact the regional campus for a copy of the main report.

Emi is a labor market analytics firm that integrates data from a wide variety of sources to serve professionals in higher education, economic development, workforce development, talent acquisition, and site selection. Emsi is a leading provider of economic impact studies and labor market data to educational institutions in the U.S. and internationally. Since 2000, Emsi has completed over 2,000 economic impact studies for institutions across three countries. Emsi is well known for its conservative methodology. Emsi’s methodology for this study adheres to the Association of American Universities (AAU) and the Association of Public and Land-grant Universities (APLU) guidelines, published in December 2014.
